Purpose:

I am proficient in Generative AI, backend development, and workflow automation, and I aim to contribute by optimizing processes and cost-efficiency through the integration of intelligent automated workflows on new as well as existing systems.

Summary:

Computer Engineering student seeking an GenAI internship with hands-on experience in Generative AI, agentic AI, and workflow automation. Built award-winning AI projects, contributed to an open-source legal NLP dataset with 1,000+ Hugging Face downloads, and proficient in Python.

Work Experience (Based on Projects)

GENAI & CYBERSECURITY ENGINEERING PROJECT – MATRIX

Self-Initiated Security Engineering Project

- Built an AI-powered platform for automated web and API vulnerability assessment.
- Developed backend orchestration with AI security agents for reconnaissance and vulnerability detection.
- Integrated LLM-based analysis for finding validation and remediation insights.
- Implemented detection for SQL injection, XSS, API security issues, and authentication flaws.

NLP ENGINEERING & APIFY INTEGRATION – PLAYLISTIFY AI

Apify Partner Program Winner | Hack This Fall 2025

- Built and deployed an NLP-powered Spotify playlist generator supporting four languages.
- Developed features including OAuth authentication, containerized the application using Docker, and built an optimized NLP parser for natural language prompts.
- Implemented a hybrid recommendation engine with caching, rate limiting, and Apify Actor (MCP) integration.

GENAI & FINTECH PROJECT – FRAUDGUARD AI

Hackathon Winner | TechXpression 2025

- Built a real-time AI-powered fraud detection platform for banking and UPI transactions.
- Contributed to anomaly detection using a Variational Autoencoder (VAE) for behavioral analysis.
- Collaborated on integrating the fraud detection pipeline to improve threat identification.

AI/ML & DATA PIPELINE ENGINEER — JITS

Independent Open-Source Project | 1,000+ Downloads on Hugging Face

- Built an NLP pipeline to convert Indian court judgments into structured legal data.
- Created and open-sourced a legal NLP dataset and processing pipeline on GitHub and Hugging Face.
- Processed thousands of court judgments to support legal AI research and information retrieval.

EDUCATION

Bachelor of Engineering in Computer Engineering - Third Year

A.P Shah Institute of Technology -Thane (2024-2028)

ADDITIONAL KNOWLEDGE

Core: Python, LangChain, Databases, Docker, Git & Version Control
Applied GenAI: LLMIntegration, Agent-Driven Automation System
AgenticAI s Orchestration (actively deepening): Multi-Agent Systems, MCP, LangGraph
Languages: English, Hindi
Hobbies: Chess, Astronomy, Learning about new AI tools that benefits our productivity
